

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- B2
1. (Original) A display device, comprising:
a motor having a rotatable output shaft;
a display object having a first and a second end;
a tether, interconnected between said motor shaft and said second end, that is rotatable in response to the rotation of said motor shaft;
a first magnet interconnected with said first end; and
a second magnet, affixed to a support, that is disposed sufficiently close to said first magnet to create a magnetic field between said first magnet and said second magnet, whereby the rotation of said motor shaft rotates said tether and said display object about an axis of rotation while said magnetic field suspends the display object in a fluid.^{air}
 - act. 2. (Original) The display device of claim 1, further comprising:
a spring interconnected between said motor shaft and said second end.
 3. (Withdrawn)
 4. (Original) The display device of claim 1, wherein said first magnet does not intersect said axis of rotation.
 5. (Original) The display device of claim 1, further comprising:
a fan that causes air flow onto said display object.
 6. (Withdrawn)

7. (Currently Amended) The display device of claim 1, wherein said tether comprises a ~~monofilament~~ fishing line.

8. (Previously Amended) The display device of claim 1, wherein the magnetic force of said second magnet is greater than the magnetic force of said first magnet.

9. (Previously Added) The display device of claim 1, wherein said tether comprises a thin, multi-filament linear element.

10. (Previously Added) The display device of claim 1, wherein said motor is an electric motor.

11. (Previously Added) The display device of claim 10, further comprising a power supply including a transformer to convert AC line current to DC current to power said motor.

12. (Previously Added) The display device of claim 10, further comprising a battery to provide power to said motor.

13-17. (Withdrawn)
